WHAT: The South Florida Water Management District (SFWMD) is joining with the Hendry-Glades Audubon Society once again as the group conducts its portion of the 113th Christmas Bird Count in Stormwater Treatment Area 5 (STA-5) in Hendry County.

Stormwater Treatment Areas are the water-cleaning workhorses of Everglades restoration. They have also become renowned havens for wildlife and outdoor enthusiasts alike.

Data collected during the annual bird counts – which span North America and beyond – are critical to studies of the long-term health and status of bird populations, according to Audubon. The STAs, managed by the SFWMD, attract large numbers of birds and also provide the public with a variety of recreational opportunities, such as hiking, biking and excellent bird watching.

During the 112th Christmas Bird Count, Audubon teams in STA-5 and the surrounding area documented 121 species and more than 133,000 birds.

The 2011 count documented the highest totals in the United States for eight species: fulvous whistling duck, blue-winged teal, endangered snail kite, purple swamphen, American coot, greater yellowlegs, Northern rough-winged swallow and gray kingbird.

Throughout South Florida, the District provides recreational access to its public lands while continuing to manage them to support environmental restoration, water supply, water quality and flood control missions. At present, the District owns approximately 621,000 acres of land that are open to the public. Many of these properties are in their natural state or have enhancements such as picnic tables, informational kiosks, primitive campsites and hiking trails.

For more information on recreational opportunities throughout the District's 16-county region, visit www.sfwmd.gov/recreation.

About the South Florida Water Management District

The South Florida Water Management District is a regional, governmental agency that oversees the water resources in the southern half of the state – 16 counties from Orlando to the Keys. It is the oldest and largest of the state's five water management districts. The agency mission is to manage and protect water resources of the region by balancing and improving water quality, flood control, natural systems and water supply. A key initiative is cleanup and restoration of the Everglades.
