STATEMENT RE: Validation of Certificates of Participation for the *River of Grass* Acquisition

“The South Florida Water Management District is satisfied with today’s progress toward validating its authority to issue Certificates of Participation under Florida law for Everglades restoration.

“The court’s validation would provide Floridians with judicial assurance that the District’s financing program and water resource projects are both in the public interest and benefit our health, safety and welfare.

“Acquiring land south of Lake Okeechobee for Everglades restoration is a once-in-a-lifetime opportunity that offers immense environmental benefits. The strategic location of these thousands of acres of land provides water managers with the flexibility to store and clean water on a scale never before contemplated to protect Florida’s coastal estuaries and better revive, restore and preserve America’s Everglades.

“As we continue working toward this historic acquisition, the District remains mindful of its responsibilities to the taxpayers and the importance of accomplishing its existing statutory mandates and legal obligations. We remain committed to prudent fiscal decision-making as this transaction moves forward and to ensuring that any projects undertaken will provide lasting benefits to South Florida’s environment and her citizens.”

About the South Florida Water Management District

The South Florida Water Management District is a regional, governmental agency that oversees the water resources in the southern half of the state – 16 counties from Orlando to the Keys. It is the oldest and largest of the state’s five water management districts. The agency mission is to manage and protect water resources of the region by balancing and improving water quality, flood control, natural systems and water supply. A key initiative is cleanup and restoration of the Everglades.
